### DETAILED ACTION

This office action is in response to the amendment filed 8/18/06. A new ground of rejection is introduced as necessitated by amendment.

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 2, 4 and 8-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Mar et al. (USP 6191660, previously cited).

As to claim 8, Mar et al.'s figures 5 and 6 shows a circuit for providing a refresh cycle for a memory device, comprising: a first current generator (IPTAT in figure 6) providing a first current in response to a constant voltage (supply voltage Vcc); a voltage generator ((192, 194, 196, 198, 200) providing a temperature dependent voltage; a second current generator (190) providing a second current in response to the temperature dependent voltage; and a frequency generator (figure 5) providing a frequency in response to the sum of the first and second currents, the frequency generator comprising a capacitor (C1) having a terminal to receive the summed first and second currents and a comparator (154) to compare a voltage at the terminal of the capacitor to a reference and generate an output signal that the voltage, at the terminal of the capacitor exceeds the reference voltage.

As to claim 2, figure 6 shows that the voltage generator includes a resistor (198) having a temperature dependent resistance.

As to claim 4, figure 6 shows that the temperature dependent resistance of the resistor increases as the temperature increases, and decreases as the temperature decreases.

As to claim 9, figure 6 shows that the voltage generator includes a current source (192), a resistor having a temperature dependent resistance, and an output terminal coupled between the current source and the resistor.

As to claim 10, figure 6 shows that the second current generator includes a transistor having a gate coupled to the output terminal.

As to claim 11, figure 6 shows that the second current is turned off at a predetermined temperature (any value may be considered as "predetermined").

### ***Conclusion***

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
